## New York University

Master of Science in Computer Engineering, GPA 3.6/4.0

Sept. 2022-May 2024

New York City, NY

- **Courses** : Internet Architecture and Protocol, Data Structure and Algorithms, Computer Systems Architecture, Machine Learning, Real Time Embedded Systems, Principle of database systems
- **Scholarships and awards**: Yearly Merit Scholarship for two consecutive years starting from Fall 2022

## Boise State University

Bachelor of Science in Computer Science, GPA 3.7/4.0

Aug. 2018-May 2022

Boise, ID

- **Courses** : Data Structures, Design and Analysis of Algorithms, Agile Development, Operating Systems, Linear Algebra
- **Scholarships and awards** : Dean's List with Honors: Spring 2020, Fall 2020, Spring 2021, Fall 2021;  
Yearly GEM Scholarship for four consecutive years starting from Fall 2018

## TECHNICAL SKILLS

- **Languages**: Java, JavaScript/Typescript, Python, C, SQL
- **Frameworks**: Nest.js, Spring boot, Django
- **Tools**: Docker, Git, Heroku, MySQL, Postman
- **Miscellaneous**: MS Office, VS Code, Rest API, Eclipse, Mac OS, Windows

## WORKING EXPERIENCE

### Ra Labs

Software Engineer Intern

May 2023-Present

New York City, NY

- Build backend services and developed smart contracts for a data trading platform using Solidity and TypeScript.
- Conducted unit testing of Solidity smart contracts using the Hardhat testing framework.
- Implemented user interfaces components using React, improving the overall usability of the platform.
- Collaborated with the frontend team to integrate backend services with React components, enhancing the user experience.

## PROJECT/RESEARCH

### Amusement Park Web App

Principles of Database Systems in-class Final project

Jan. 2023-May 2023

New York City, NY

- Collaborated with a team of three to analyze product requirements and design a scalable database system using Oracle Database Modeler.
- Implemented the designed database system into a web application using Django, enabling essential functionalities such as CRUD operations, user sign-in/sign-up, shopping cart management, and streamlined checkout.
- Utilized Django's ORM to ensure efficient data management and retrieval, optimizing the performance of the web application.
- Implemented secure authentication and authorization mechanisms for user management, leveraging Django's built-in authentication system.

### New Hire Onboarding Application

Sponsored Capstone Project with Micron Technology

Jan. 2022-May 2022

Boise, ID

- Collaborated with Micron Technology on a 4-month onboarding application project, developing a new hires' training platform
- Utilized Angular with bootstrap for the frontend, ASP.NET for the backend, and MongoDB for the database to create a comprehensive, user-friendly training platform
- Implemented CRUD functionalities for various training modules and established role-based access control for different users, ensuring that users had access only to the modules assigned to them
- Utilized a test-driven development process with Unit and Integration testing and employed Selenium WebDriver to test the frontend and Postman to test endpoints
- Demonstrated experience with Agile Development and managed the team's GitHub repository, including setting up CI/CD with GitHub Action, creating and assigning tasks, reviewing pull requests, squashing commits, and resolving merge conflicts

### Joint research project between Boise State University & University of Wisconsin-Madison

Undergraduate Research Technician of Informatics Skunkworks

Jan.2021-Jan.2022

Boise, ID

- Improved image classification accuracy from 90% to 97% and reduced classification time by 20%
- Classified over 500 nanostructure images taken from atomic force microscopy
- Developed and trained convolutional neural networks with Python to scan and identify quantum dots within an image
- Using built-in MATLAB functionalities to replicate the experiment in papers in microscopic image detection
- Attended the progress workshop and presented semester-long progress slides to BSU and UW-Madison researching teams
